HOPPING DUSTBALLS: GAME IDEA

NOVEMBER 12, 2020

FIGURE: INITIAL SKETCH OF SETUP FOR PROTOTYPE 1

Game idea

Hopping Dustballs is a platform game where the player is a toy janitor that wakes up at night to eradicate dust bunnies by tagging them. The player needs to find all of them within a limited time to complete a level.

Game design tools

Constraints:
The player will be pressured for time and has a limited visibility bubble.

Challenges:
Each level presents a new set of challenges. For instance, in one level, the player is required to jump on top of the bunnies to reach tall platforms.

Prototype 1

ONE LEVEL:
Simple setup to allow players to adapt to the platform space and familiarize themselves with the basic actions (running, jumping, tagging bunnies).

QUESTION ASKED:
Do the platforms and items' positions work effectively with the range of visibility to communicate possible player actions?

Prototype 2

TWO LEVELS:
- **Level 1:** keep level from first prototype.
- **Level 2:** add new challenge (ghost bunnies with lower opacity) + reduce time to add tension

QUESTION ASKED:
Is there a smooth transition from the first level to the second in terms of level of difficulty?
