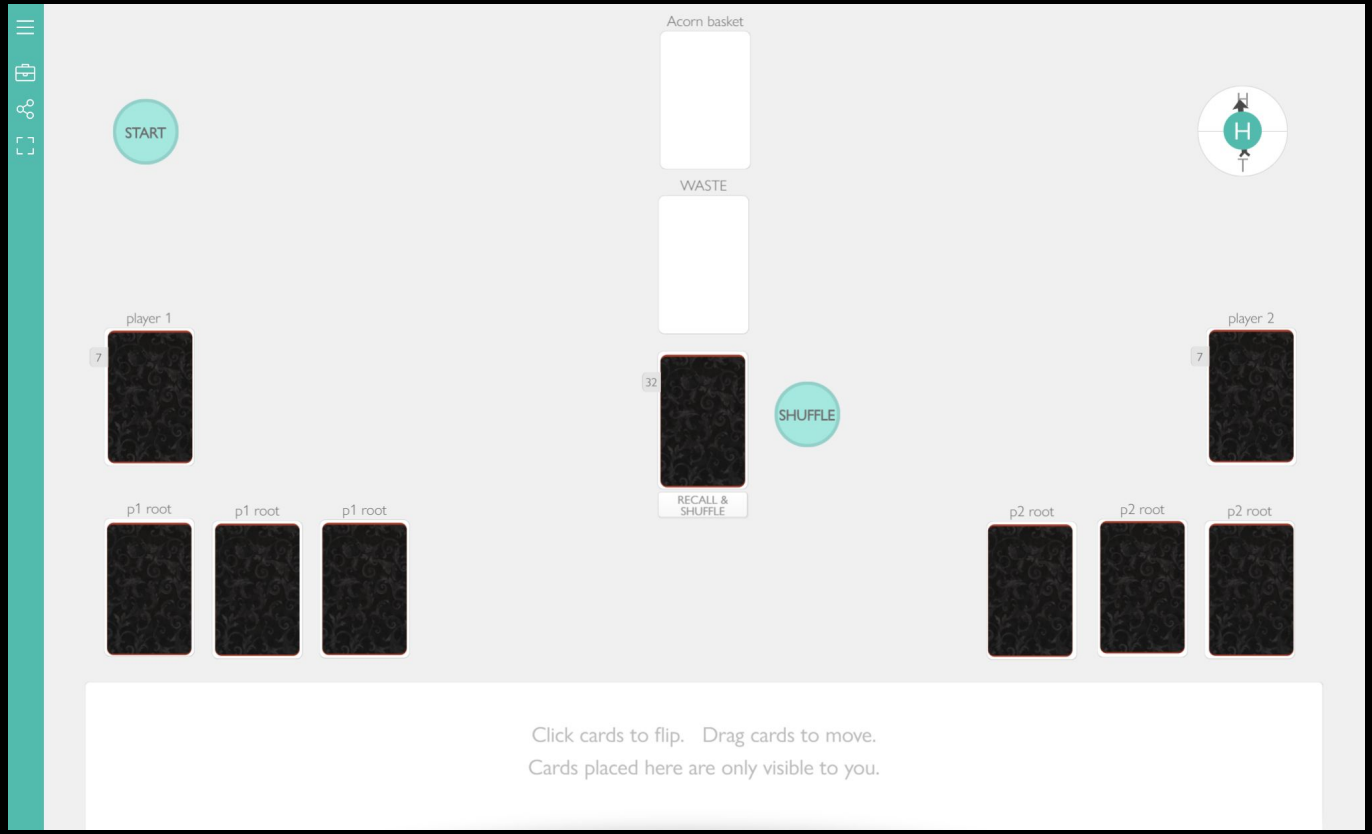
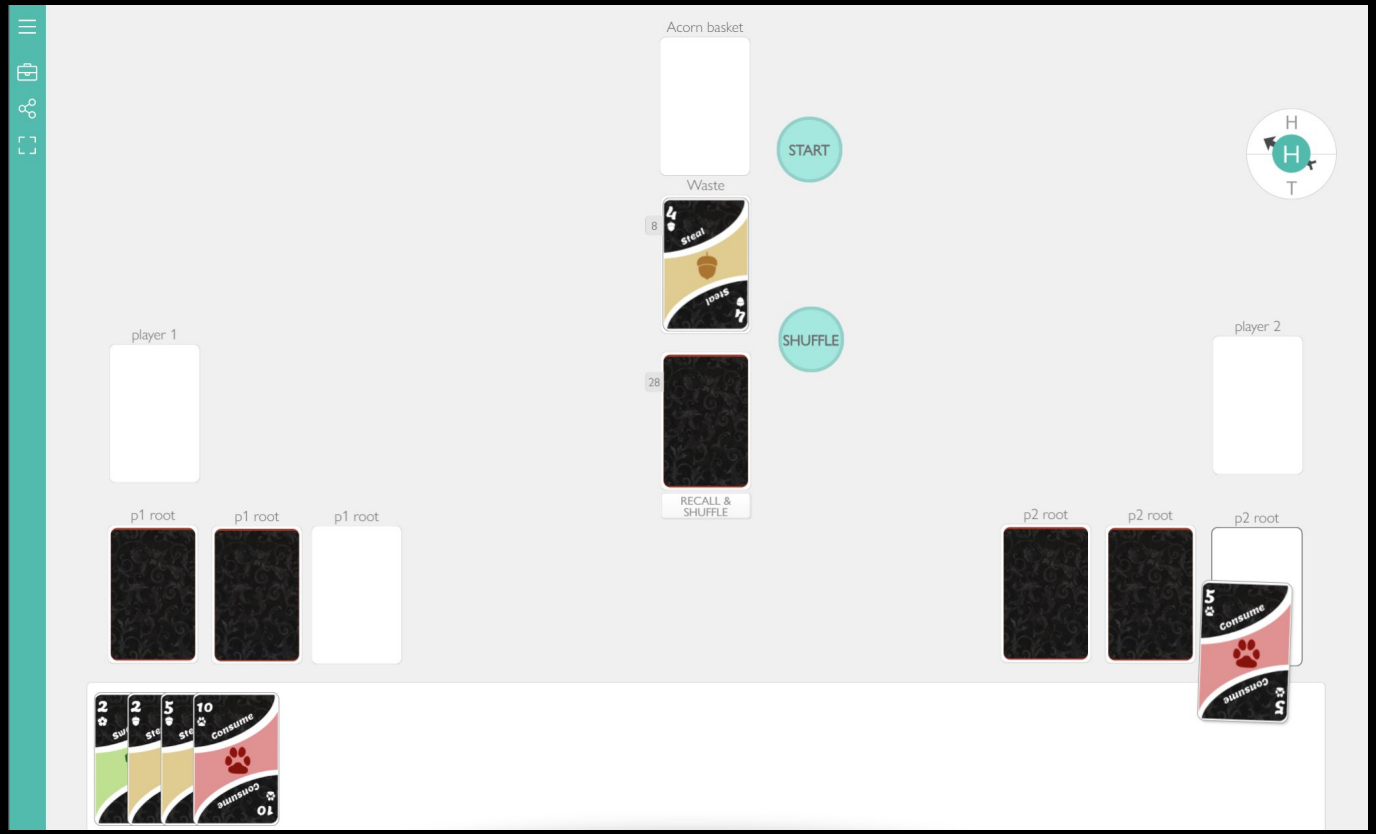
Visual documentation of Root Fruit

Steve Berthiaume and Sharon Ku



Setup of game: each player gets 7 cards from their placeholder and have 3 cards in their roots.

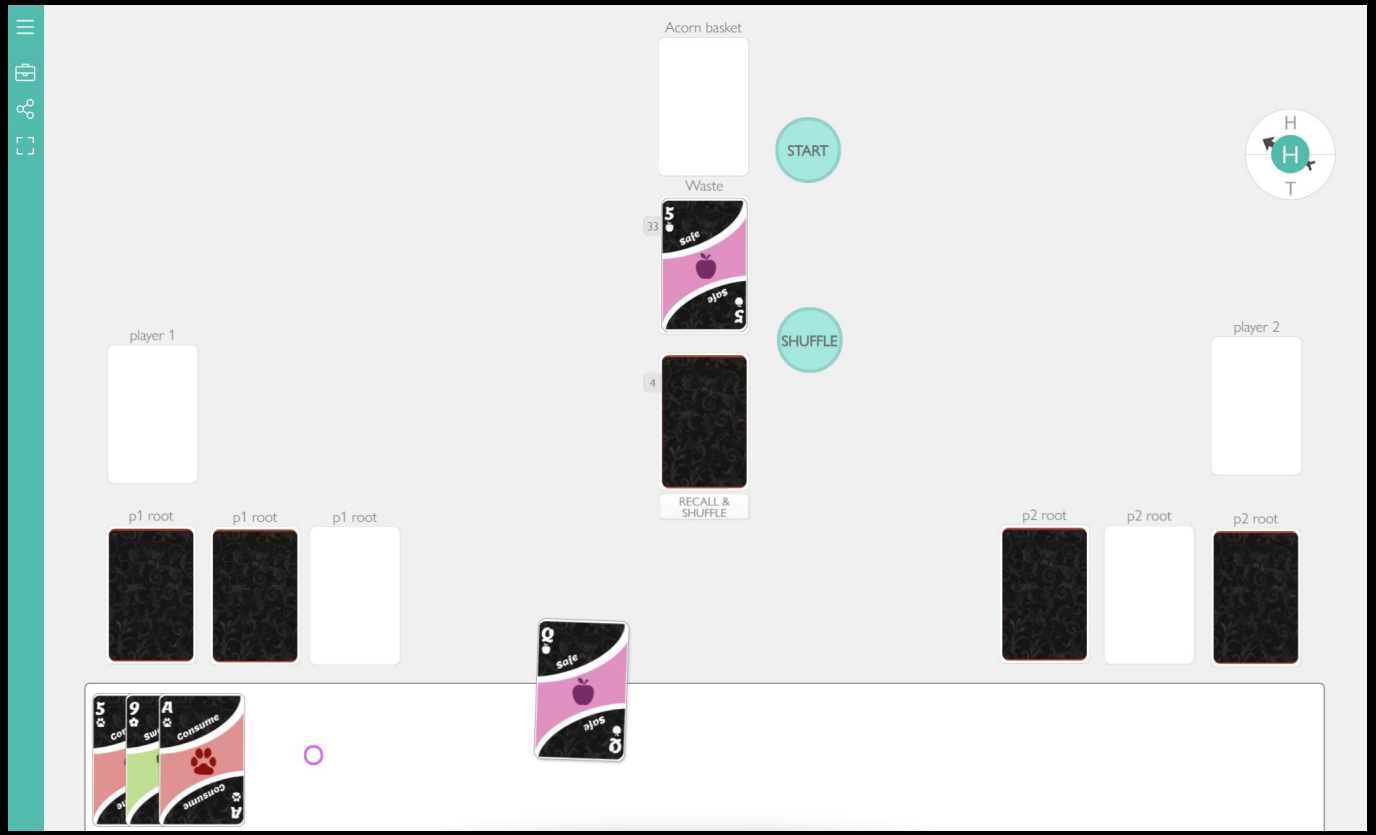
Player 2 received an acorn from the pool and stole an acorn from the opponent.



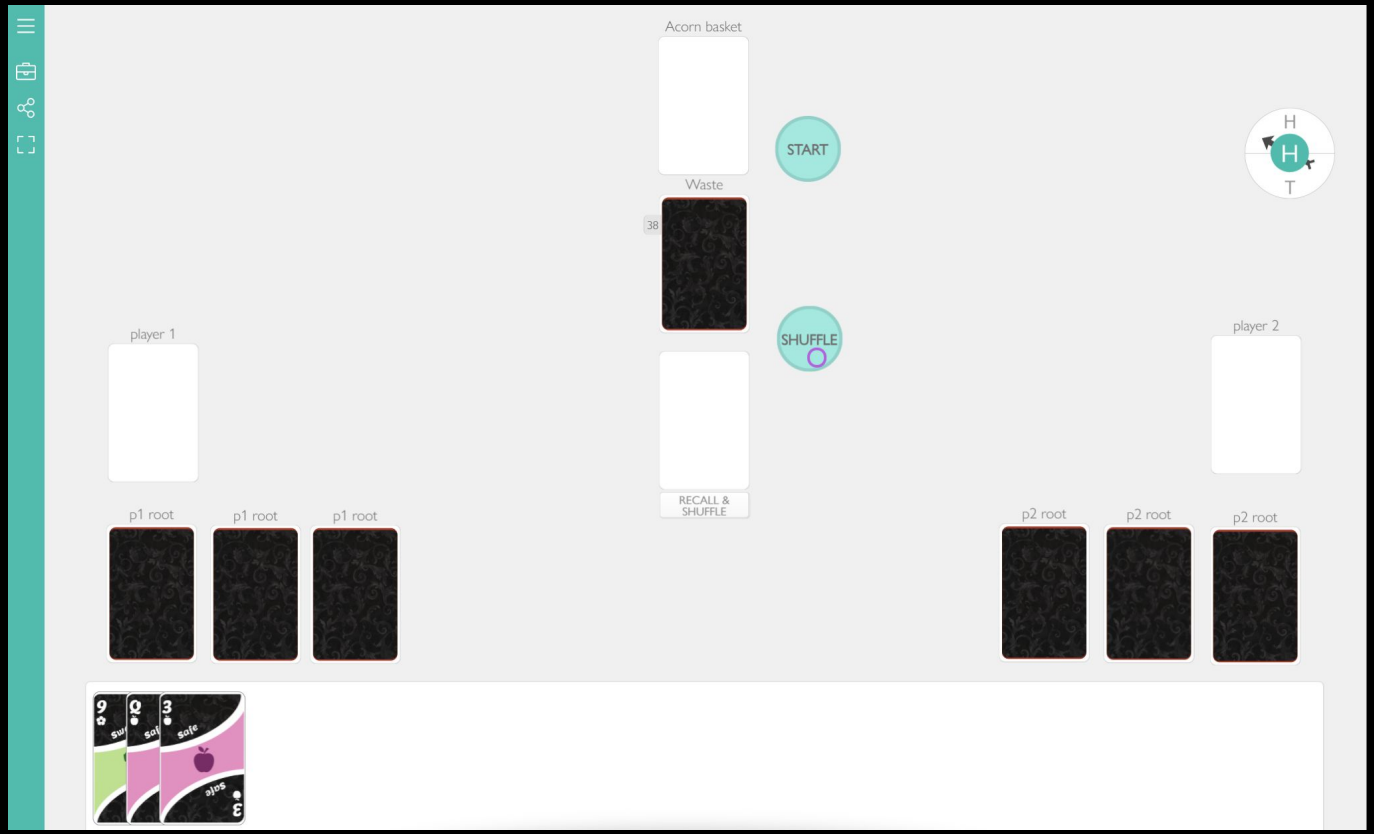
Player 2 is refilling the roots after having an empty root.

Since player 2 has no fruit to feed the animal, player 2 is depositing a plant and animal into the waste.

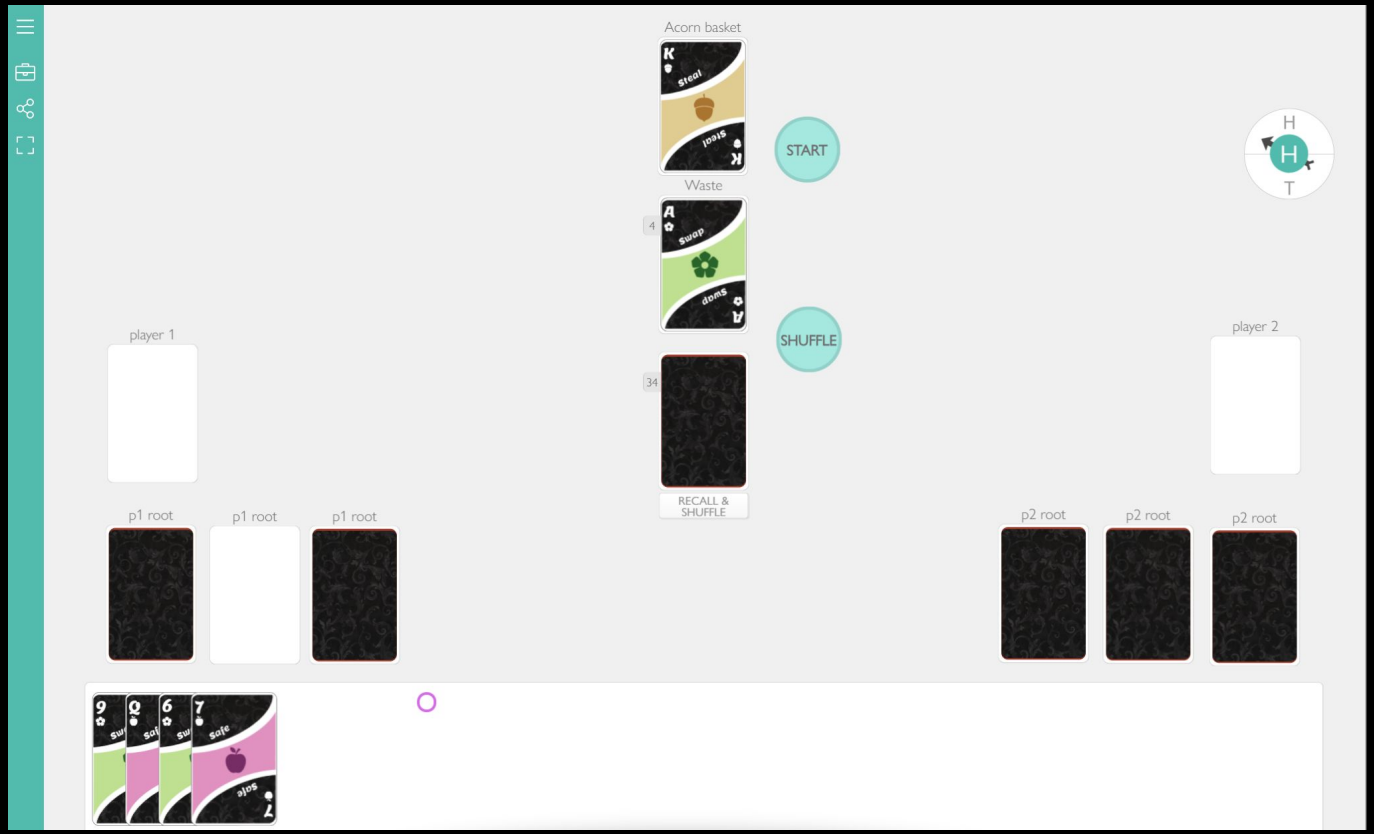
Player 2 received a plant from the pool and swapped a card from the root with card from the hand.



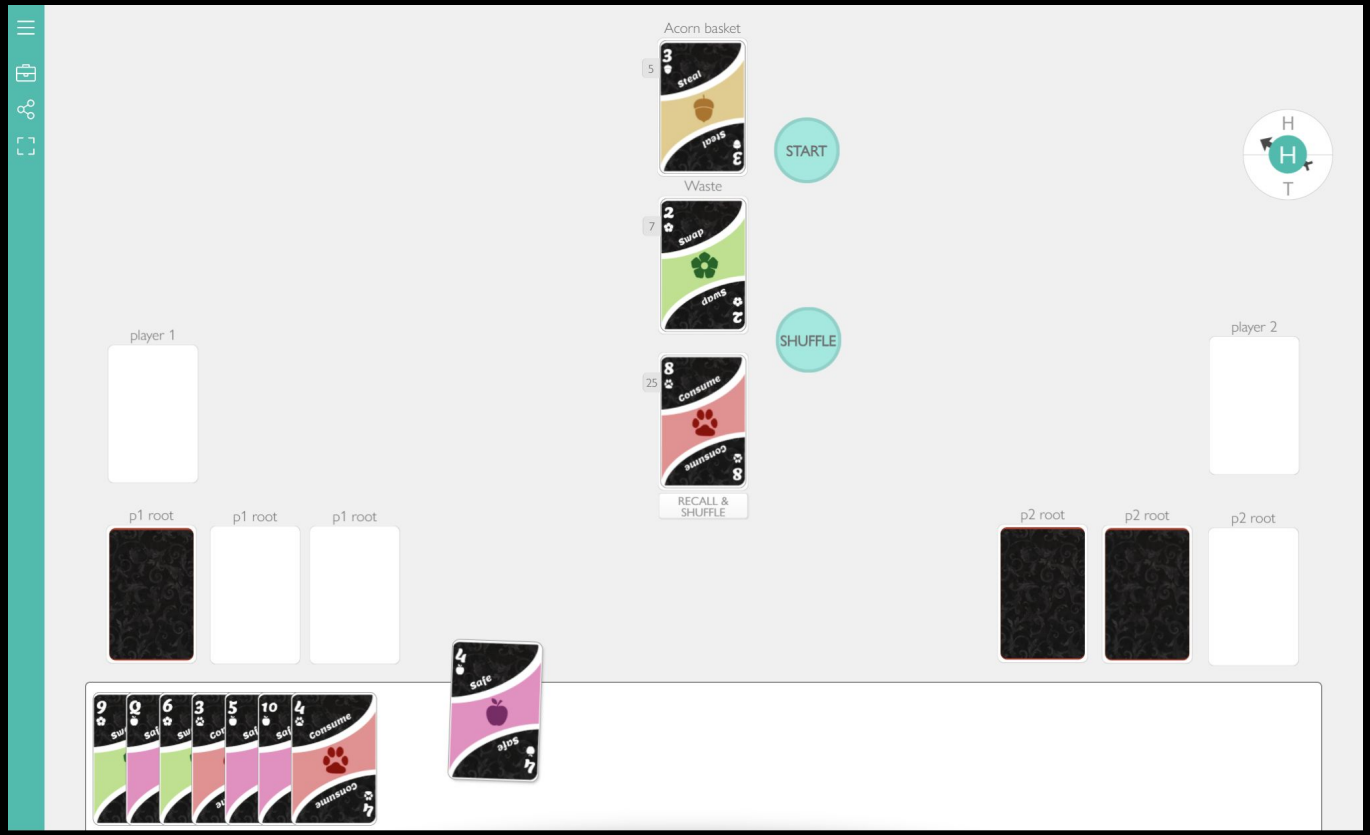
Player 2 received a fruit from the pool and placed the fruit in the hand.



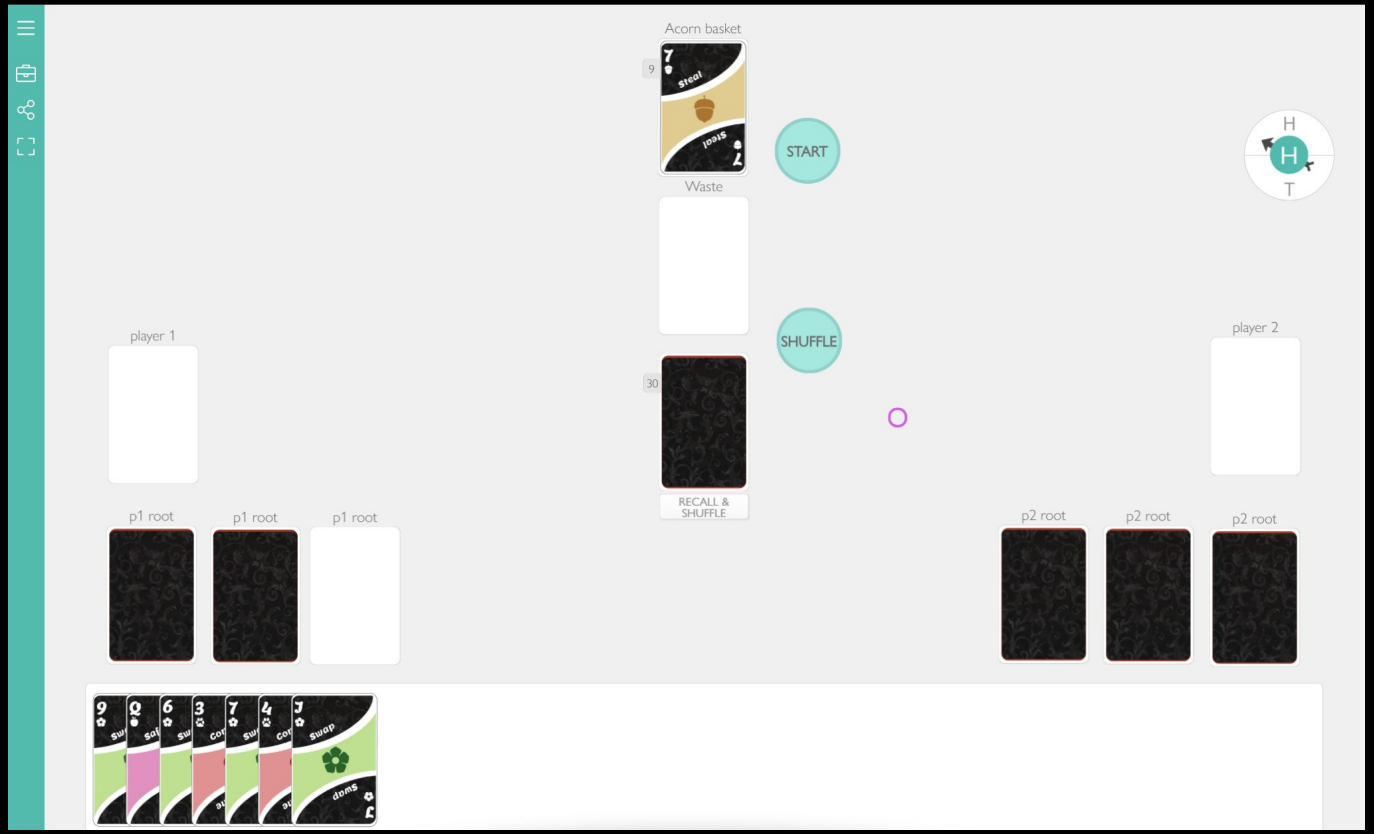
Beginning of Round 2: there are no more cards left in pool, so the players clicked “shuffle” to transfer the cards from the waste to the pool.



Starting from Round 2 onwards, the players place the acorns in the Acorn basket instead of the waste.



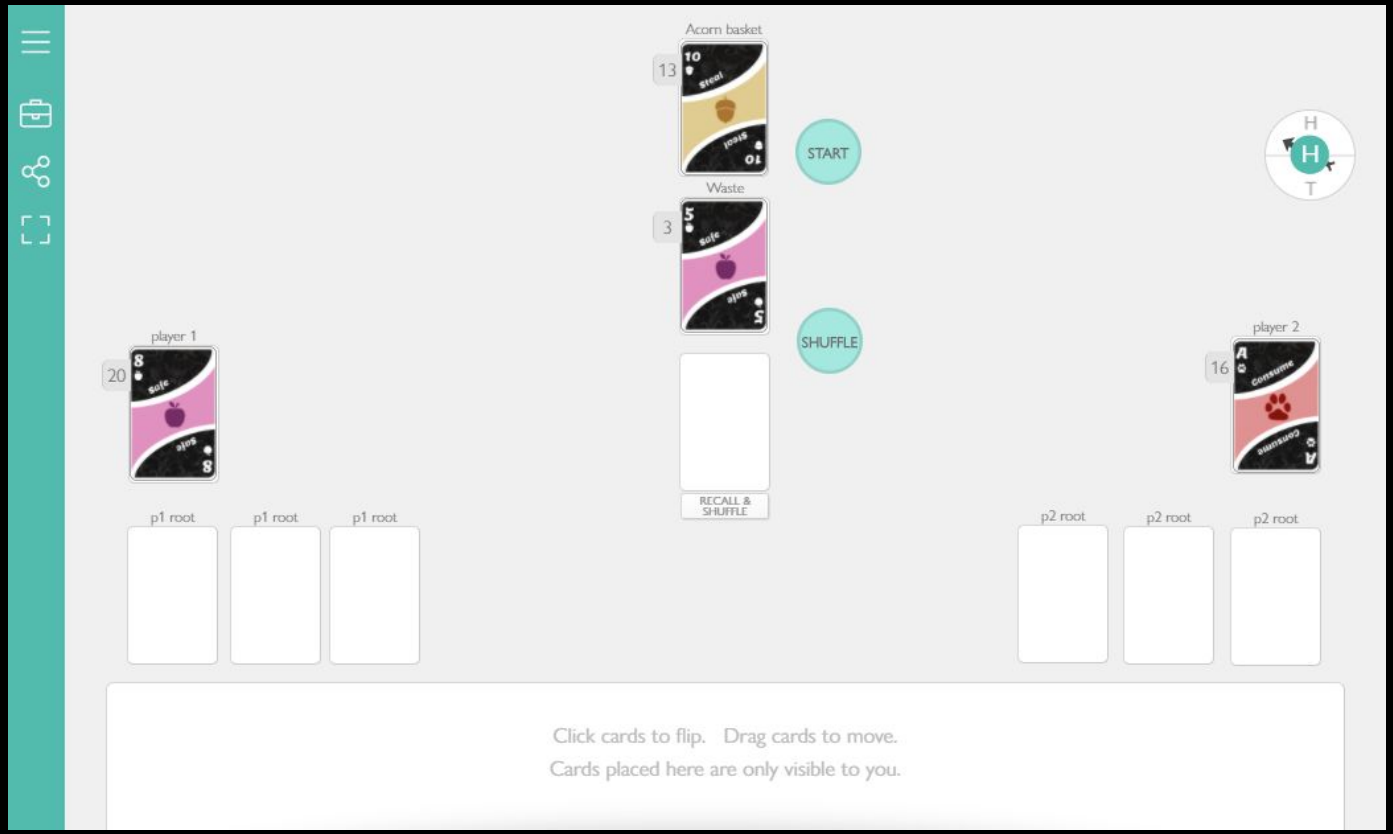
Player 1 put a fruit in the waste after receiving an animal from the pool.



Beginning of Round 3: the players placed all the cards from the waste into the pool and left the Acorn Basket alone.

No more cards in either the pool or the waste ~ Reveal Roots

3 animals were in the roots, so player 2 wastes 3 fruit to claim them.



After both players counted their cards, player 1 pulled off a surprise comeback victory!
